Ahmad Kassar

FULL-STACK DEVELOPER — WEB APPS & ERP SYSTEMS

Beirut, Lebanon | | ahmadkassar771@gmail.com
linkedin.com/in/ahmad-kassar-2627ab2bb | github.com/ahmadkassar1

PROFESSIONAL SUMMARY

Full-stack developer with 3 years building ERP and business-platform software end to end: Angular and TypeScript on the client, Next.js API routes, Node.js, and PostgreSQL behind it. Shipped features on two production systems — TheBridge (Horecons' sales and inventory ERP) and Populus (Interphase's configurable business platform) — across order entry, inventory, task boards, form builders, and workflow automation. Independently designed, built, and deployed 4 products, including an AI lead-generation SaaS and a multi-tenant restaurant ordering platform on Next.js and Supabase, plus n8n and LLM-driven automation. Beirut-based, comfortable owning a feature from database schema to shipped UI.

TECHNICAL SKILLS

Frontend: TypeScript, JavaScript (ES6+), Angular (standalone components, signals, RxJS), React, Next.js (App Router), HTML5, CSS3, Tailwind CSS, SCSS, shadcn/ui, reactive forms, responsive mobile-first design, accessibility (a11y), SEO

Backend and Data: Node.js, Next.js API routes, REST API design and integration, PostgreSQL, Supabase (auth, row-level security), SQL, database schema design, multi-tenant architecture, authentication and role-based access

AI and Automation: LLM API integration (OpenAI, Claude), AI-generated content inside product flows, prompt design, n8n workflow automation, webhooks and third-party API integrations, automated lead-capture pipelines

Engineering and Delivery: Git, GitHub, pull-request code review, unit testing (Jasmine, Jest), Agile sprints, Angular CLI, Vite, Webpack, Vercel CI/CD pipelines, Linux, shell scripting, C and C++ fundamentals

PROFESSIONAL EXPERIENCE

Frontend Developer — Horecons
Oct 2025 – Present

Ghazir, Lebanon

- Extend TheBridge, the ERP Horecons runs its daily sales and inventory operations on, shipping Angular features built with standalone components and signals through pull-request review.
- Build responsive, keyboard-accessible CRUD screens across 3 ERP modules — SalesSphere (sales), Stock Management (inventory), and ProjectPilot (projects) — all integrated with REST APIs through RxJS async data flows.
- Design entry-time form validation in the SalesSphere order flow that catches data-entry errors before an order is submitted, covered with Jasmine unit tests.
- Deliver React and Next.js web applications for clients in the UAE, landed against fixed event-date deadlines and handed over with post-launch support.
- Automate lead capture by wiring form submissions into n8n workflows, so new leads enter the pipeline without manual re-entry.

Frontend Developer — Interphase
Mar 2024 – Sep 2025

Beirut, Lebanon

- Developed 3 core modules of Populus, a business platform where teams configure their own workflows — the Kanban task board, form builder, and website builder — using Angular and TypeScript in Agile sprints.
- Owned the Kanban task board build — task states, columns, filters, and the automation engine that moved tasks between states — plus the client-side state management behind board interactions.
- Constructed the form builder with Angular reactive forms and RxJS-driven submission logic: dynamic fields, modular form sections, validation flows, and state transitions behind user-configured workflows.
- Implemented the website builder's composable sections and UI blocks with semantic HTML5 structure, which end users arranged and customized without developer involvement.

PROJECTS

AI Lead-Generation and CRM Pipeline SaaS *Next.js, TypeScript, Supabase, API routes, LLM integration*

- Built a SaaS-style lead-management product that moved leads from capture to closed deal: forms stored submissions in Supabase and fed a CRM pipeline with stages, follow-ups, and AI-drafted outreach messages.
- Modeled the database schema, pipeline stages, and API routes, and integrated the AI generation step so each lead record carried a ready-to-send outreach draft.

Restaurant QR Menu and Ordering Platform *Next.js, Supabase (PostgreSQL), multi-tenant architecture*

- Created a multi-tenant restaurant platform with QR menu browsing, product and category management, pricing, and ordering flows, designed mobile-first for diners using their own phones at the table.
- Enabled each new venue to onboard through configuration rather than code, with admin screens managing restaurant data, categories, and menu items per tenant.

Content Publishing Platform *Next.js, TypeScript, Supabase, Tailwind CSS*

- Developed a content platform with a full editorial workflow — database-backed articles, categories, newsletter signup, and an admin publishing flow from draft to live — deployed through a Vercel CI/CD pipeline.
- Standardized page layouts with per-page SEO metadata and connected newsletter capture to the same data layer as the articles.

Scoopadoop E-Commerce Store *Angular (signals), TypeScript, SCSS, REST APIs*

- Derived every cart change, filter, and loading state from Angular signals' fine-grained reactivity, replacing duplicated flag variables and the redundant re-renders they caused.
- Structured product browsing, category navigation, product detail, and cart checkout as 4 separate routed views sharing one component architecture, so each flow could change without touching the others.

EDUCATION

Software Engineering Program (project-based, peer-to-peer) — 42 Beirut **2024 – 2025**

Completed alongside the full-time role at Interphase: C and C++, algorithms, data structures, memory management, Linux, Git, shell scripting, debugging, and peer code review.

B.A. in Business Administration — Institut Renee Mouawad **2020 – 2022**

LANGUAGES

Arabic: Native | **English:** Professional working proficiency
